

ICT System Administrator

We are looking for an IT professional to join us on an exciting journey! We are growing rapidly and we find ourselves in need of an ICT System Administrator who will be responsible for supporting the entire organization with hardware and software equipment and services that will empower our employees to do their best work. Starting from a hands-on role you will have the possibility to grow with the company and help professionalize and expand our IT environment.

AN AMBITIOUS COMPANY

At NFI, we design, develop, integrate, market and service advanced metrology machines, which enable our customers - the world's leading chipmakers – to increase the production yields, and thus, the functionality of their microchips. In turn this leads to smaller, more powerful consumer electronics. We aim to develop leading edge metrology systems, to be installed on site, within specifications, on time, with quality exceeding the customer's expectations.

OBJECTIVES OF THIS ROLE

- Design, configure, test, maintain and administer computer networks and related computing environments including computer hardware, systems software, applications software and all configurations;
- Plan, coordinate and implement network security measures to protect data, software and hardware.
- Develop and execute disaster procedures, and maintain data backups;
- Recommend changes to improve systems and network configurations, and determine hardware or software requirements related to such changes.
- Continuously analyze current process, technologies, and vendors to ensure they offer the best possible service and value for company needs;
- Maintain and expand company website;
- Train employees on both software and hardware, troubleshoot, and provide technical support when needed.

WHO YOU ARE

- An inquisitive, positive attitude, entrepreneurial personality with a good sense of humor;
- An open communication style and the ability to create a basis of trust and support;
- You enjoy working both independently and in a team;
- You bring us a lot with your work experience, but are still eager to learn and to grow with us;
- Proactive, resourceful and service minded.

WHAT YOU BRING TO THE TABLE

- Bachelor's degree in technology or computer science;
- Professional certifications;
- 5+ years' experience in a high-tech experimental and/or production environment;
- Experience with or knowledge of programming languages and operating systems (MS Exchange, Active Directory, and other Windows-based systems), current equipment and technologies, enterprise backup and recovery procedures, and system performance monitoring;
- Strong creative and analytical thinking;
- Expertise with implementing, configuring, and testing solutions;
- Experience in website hosting and maintenance;
- Experience with negotiating contracts with hard- and software suppliers;
- Excellent command of the Dutch and English language, spoken and in writing.

WHAT YOU CAN COUNT ON

Nearfield Instruments offers a fresh, exciting, fast-paced working, international and dynamic environment where you will be able to help shape the company. We offer a lot of flexibility, independence and freedom. A chance to be part of the growth of an exciting new company and make a difference! Personal and professional growth is highly supported.
